Bird Migrations

Most Birds Fly At Night
Long Traps

Most of the birds that migrate to and from the Canadian northlands prefer to travel at night, reports the Department of Mines and Technical Surveys, which administers the Migratory Bird Convention Act.

The night migrants include all the numerous flycatchers, vireos, warblers, thrushes, crickets, kinglets, kingfishers, shrikes and most of the sparrows. Some species of waterfowl under certain circumstances also migrate by night. Usually the birds launch into flight shortly after dark and stop before dawn. These night travellers may be observed by focusing a low-power telescope on a tall chimney during the height of the spring and autumn movement. The glowing smoke of the moon forms a backdrop against which the birds in passing are clearly outlined. Though a migrant may be flying rapidly, at a great height it will appear to float across the face of the moon.

Some species make their migratory flights in daylight. These include the swallows, swifts, hawks, kestrels, various hawks and the ducks and geese. The insect-eating birds often migrate by day, but they may be feeding actively on the wing. The robins left at night from the north migrate at night and drive forward unceasingly until the end of the day's journey.

The annual spring migration of the birds usually begins in Canada in the latter part of May and continues up to early June. The movement to the south is beginning now and is completed in the face of many hazards, badlands and adverse weather conditions. The great distances that some kinds of birds travel on these journeys are amazing. The bobolinks that nest in Canadian meadows winter in southern Brazil and neighboring countries while the tiny house wren might return each spring from Mexico and Central America.

Soon Grew Obsolete

Newer And More Powerful War Weapons Being Constantly Developed

Weapons now in use will be obsolete to some extent in 1942 and 1943 because of the production of more powerful instruments of war. Dean Rusk, director of the National Research Council, in an address to the Canadian Club of Montreal, said that the machine gun, the tank, the airplane, the submarine and the battleship are all becoming obsolete. He said that the machine gun, the tank, the airplane, the submarine and the battleship are all becoming obsolete.

The demand for equipment for the fall of France is so great that he said that no time could be devoted to the development of new types of weapons.

HERE'S AN IDEA
Of course, says the Christian Science Monitor, if the situation really gets that bad, we may have a desperate need of the old old war machine, the machine gun, the tank, the airplane, the submarine and the battleship. The demand for equipment for the fall of France is so great that he said that no time could be devoted to the development of new types of weapons.

The production of barley on summer-fallow land withdrawn from wheat is another illustration offered to grain producers. Soon on such land, and given a reasonable amount of rainfall, there can be every expectation of remunerative returns. Generally speaking, neither barley or oats are given a fair show in this district, which is not surprising in view of the average prices for these grains over past years. Moreover, considerably less rainfall is needed to raise a wheat crop than for either of the coarse grains mentioned. But with the price of barley set at 60 cents (which means about 40 cents locally), and the bonus of \$2 per acre for every acre withdrawn from wheat production, with any luck in the shape of weather and yield, this looks like good business, even if the grain is not put to its most lucrative use by the producer—namely, for the feeding of hogs.

It should be noted, reduction of wheat acreage means less wheat than was recorded in 1940. In another column on both last week and this week, given by the District Agriculturist.

Local and District

Robt. Stoenes, R.C.A.P., was some on leave last week.

Born, at Hanna hospital, on Thursday, April 9th, to Mr. and Mrs. Frank Todd, a son.

Miss Ruth Craig was visiting with friends in Drumheller during the Easter vacation.

Joe Coonsens, who has been spending the winter at the coast, returned to Delia this week.

William Nichol, has enlisted in the Canadian Army, and is stationed at Vernon, B.C.

Mrs. Earle Draper, of Ottawa, Ont., a niece, was a recent guest of Mr. and Mrs. Kinsie.

Dr. W. H. and Mrs. Spady, of Drumheller, were visiting in Delia on Sunday last.

Gilbert Reib, R.C.A.P., who is stationed at Macleod, was home leave for the week end.

Mrs. Marie and Miss Wilma Gibson were visitors in Calgary during the Easter vacation.

G. W. Kinsie, of Vancouver, B.C., spent Easter with his mother and brother, Delia.

The U.P.W.A. local made a large crowd on Wednesday night last. Proceeds to go to the Milk for Britain Fund.

Hugh McLaren returned from Calgary on Saturday last, following a stay of two weeks receiving medical treatment.

Mrs. Potter (nee Nancy Chase) spent the Easter vacation at the home of her mother, Mrs. Florence Chase, in Delia.

Robert ("Bobby") Lee Timm, an enlisted in the R.C.A.P. at Calgary as a pilot or observer, and will start his training at a Manning Depot on May 2nd.

The ladies of Delia are very quilt conscious these days, when these ladies are so much in demand. The Red Cross ladies are quilting every Tuesday.

Mrs. Bert Simpson returned some this week from the coast, where she has been doing her son, Jimmy, who is serving with the R.C.A.P., stationed at New Westminster.

Rev. Thos. and Mrs. Taylor left for Edmonton to attend the wedding of the elder daughter, Elizabeth, Mrs. C. Grant and Mrs. A. Wilcox accompanied Mr. and Mrs. Taylor to Edmonton, where they visited relatives.

In the list of donations to the Delia branch of the Red Cross, the quilt donors are the Ladies of Delia was inadvertently omitted. The name of Mrs. Kinsie, who is serving with the local committee of the Red Cross.

Every Monday evening, Mrs. W. J. Bars had a first-class club in the Armies, at which a very large number of ladies attended, gaining some very useful knowledge.

The many ladies and friends of Mrs. Geo. Lowe miss their weekly social at the various localities mentioned, and are sorry to learn she is not progressing as any other crop. Especially in the face of the probable safety damage to wheat in many of our districts.

Flax should be needed on clean summer-fallow land at about the same time as oats. Recent findings indicate that treating the seed with Cereson or Lysosan can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth. The Canadian Wheat Board has recently released an interim report showing plots where stocks of No. 1 and No. 2 flax are in store at country elevators.

Wedding Bells

MUNDY-TAYLOR

On April 3rd, a wedding was solemnized at St. Stephen's Church, Edmonton, by the Rev. Canon Mundy, of the United Church, when Elizabeth, elder daughter of the Rev. Thos. and Mrs. Taylor, of Delia, became the bride of John C. Mundy, of the Edmonton Builders.

The bride, wearing a charming Grecian gown of white crepe de chene, with long sleeves and held in place by a coronet of orange blossoms, was given in marriage by her father, Mrs. Margaret Taylor, of Delia, sister of the bride, attended as bridesmaid, wearing a smart flowing gown of coral taffeta, and carried a basket of spring flowers. The bridegroom was escorted by his nephew, James Mundy, of Delia.

Later, a reception was held by Miss Jessie Montgomery, an old and valued friend of the bride. Those present were heavily decorated with a variety of spring flowers. A three-tiered cake having been cut by the bride, the bride and groom toast to the young couple, with which the groom responded.

BRIDAL SHOWERS

On Wednesday afternoon last, in the Olympia Theatre, Mrs. Howard Sloan (nee Violet Morrison), was honored by the people of Delia with a bridal shower.

Despite the stormy weather, a large crowd congregated to wish the popular young lady happiness. The bride was escorted by the groom, who was wearing a suit of silver in "First Love." After the gifts were passed around and duly admired, Mrs. Sloan responded very fittingly. Tea was then served by thirty-three hostesses.

Mrs. Irene Brunner and Miss Norma McEwen gave enjoyable piano-forte selections during the proceedings. Mesdames R. Cook and Stanley Horsky sang, "Well, that you love me" which was beautifully rendered. They were accompanied on the piano by Miss Irene Brunner.

On Saturday, April 11, a large shower was held in honour of Mrs. E. Marshall (nee Darline Fox), who is very well known and popular, having lived all her life just on the border of Delia.

From eighty to one hundred people were present, and the gifts were, as usual, very lovely and numerous.

Mrs. Marshall will make her home in Drumheller for the present.

Bonus on Flax Production

Despite previous statements that seed taken out of what production and planted to flax, would not require the \$2 per acre bonus, it is now announced that Ottawa has decided that flax acreage will qualify for the bonus, providing it is acreage taken out of wheat production of the year 1940 record.

Flax and Barley

(By A. J. CHARNETSKI, District Agriculturist, Delia.)

Some of the flax originally intended for wheat might well be diverted to flax, and with a guaranteed price of \$2.25 per bushel, basis Fort William, it can be grown at least as profitably as any other crop. Especially in the face of the probable safety damage to wheat in many of our districts.

Flax should be needed on clean summer-fallow land at about the same time as oats. Recent findings indicate that treating the seed with Cereson or Lysosan can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth.

The Canadian Wheat Board has recently released an interim report showing plots where stocks of No. 1 and No. 2 flax are in store at country elevators.

For the Delia district, the following flax varieties are recommended: Endless Michie, Royal, Beyer, mono, Hanna, Morris.

Barley is another crop which can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth.

Barley is another crop which can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth.

Barley is another crop which can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth.

Barley is another crop which can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth.

Barley is another crop which can stand average insects, and should be needed at the rate of 25 to 30 pounds per acre, and must not be taken that it is not needed over in depth.

from this standpoint alone it should be given more favorable consideration.

Barley as a crop is very seldom given a "Fair Shake"; usually it is seeded last on oldest, driest and least productive land, and for this reason a popular opinion has developed that it never produces the equal or greater number of pounds of grain per acre as compared to other crops. This is not the case (drought areas excepted), as under fair or good conditions it gives us fully as good or better returns in terms of pounds of grain produced per acre of crop grown.

It might be advisable to give some serious thought to bettering a percentage of our better stubble lands and summerfallow to barley production.

Those desiring to obtain seed should contact local elevator agents or municipal secretaries. Car lots of No. 2 and No. 3 seed barley of Trem, Oll, Nerval and O.A.C. 21 varieties might be shipped in from Calgary or Edmonton government elevators. Price per bushel is 60¢ and 67¢ respectively, (no shipping point).

If sufficient orders for car load can not be obtained, several farmers can, by arrangements, send a truck to the government elevator at Calgary, or Edmonton. It would be advisable to bring sacks for packing the grain directly out of the bin, and thus prevent possible seed mixtures.
